

**METHOD, SYSTEM, AND COMPUTER PROGRAM PRODUCT FOR
SYNCHRONIZING INFORMATION WITHIN A GLOBAL COMPUTER NETWORK**

ABSTRACT OF THE DISCLOSURE

In one embodiment, at least one first information handling system of a user receives an excerpt of information associated with the user. In response to the excerpt, the first information handling system automatically translates the excerpt into an XML format, so that the translated excerpt is compatible for operation with at least one second information handling system of the user. The first information handling system synchronizes the translated excerpt with the second information handling system.
